

TEMPEST RISING

Developer	Slipgate Ironworks
Publisher	THQ Nordic / 3D Realms / Knights Peak
Platform	PC (Windows)
Roles	Associate Producer, Assistant Game Director, Game Designer and Level Artist

I joined the project by heading up and producing the Level Design and Level Art teams. I helped establish and coordinate both teams as campaign levels moved from design, through direction approval, and into set dressing.

Over roughly eight months, we brought the remaining 18-20 campaign levels from blockout through full set dressing to a high, shippable standard.

ASSISTANT GAME DIRECTION & GAME DESIGN

When the project received an extension, I moved into the role of Assistant Game Director and Game Designer. The extension focused on polishing and refining the entire game from top to bottom. Alongside polishing both single-player campaigns, I handled a range of additional tasks through the remainder of development:

- Improved unit responsiveness and movement delays so units felt better to control without losing visual fidelity or animation flair.
- Designed and wrote the achievements for the entire game, coordinating achievement icons with Art and implementation and testing with Programming and QA.
- Led production of Steam Trading Cards, emoticons, wallpapers and badges.
- Produced and directly worked on the majority of the multiplayer levels, contributing hands-on design, set dressing and testing alongside the teams.

POST-LAUNCH & THE VETI'S WRATH

Post-launch, I continued both producing and working directly on additional multiplayer levels, including hands-on design, set dressing and refinement, to maintain a steady supply of new maps while development began on the Tempest Rising expansion, *The Vet's Wrath*.

I was also responsible for level-art set dressing on a number of the new Vet's campaign missions while continuing hands-on work on multiplayer levels.

WARPAWS

Developer	Slipgate Ironworks
Publisher	1C / Fulcrum Publishing
Platform	PC (Windows)
Roles	Game Director, Game Designer and Producer

I began as Game Director and Game Designer during early pre-production. Because WARPAWS was developed with a small team and limited budget, my responsibilities expanded considerably over the course of production.

The role required broad creative ownership, close coordination across disciplines and, later, direct responsibility for production planning and publisher deliveries.

CREATIVE DIRECTION & CROSS-PROJECT SUPPORT

- Created and developed designs for gameplay systems, units, levels and user-interface features.
- Guided the teams working across each discipline and maintained the overall creative direction.
- Coordinated with other internal projects to share specialist talent and technology.

SHARED TECHNOLOGY & TEAM DEVELOPMENT

WARPAWS entered production alongside Tempest Rising. We coordinated the sharing of programming talent and technology to accelerate early development, while the remainder of the WARPAWS team was staffed specifically for the project.

We also looked for promising talent with less industry experience and gave them room to grow with close guidance. I mentored the project's main Animator and Environment Artist throughout development. Both showed significant potential, relocated to the Aalborg office and later transferred to Tempest Rising, where they progressed into lead roles within their disciplines.

EXPANDED PRODUCTION RESPONSIBILITIES

When the project's internal producer moved to a larger company initiative, I also assumed day-to-day producer responsibilities, supported by company management when required:

- Ran weekly publisher syncs and coordinated milestone deliveries.
- Prepared builds, screenshots, videos and supporting content for milestone submissions.
- Organized meetings and integration evaluations with Unity Multiplay Hosting and Amazon Web Services for online matchmaking support.
- Maintained development roadmaps and schedules, ensuring deliveries remained on track.

PROJECT OUTCOME

As development approached completion, the team had delivered each milestone on schedule and within budget. Publisher discussions later fell through amid the post-COVID challenges affecting the games industry. The project was placed on pause, and its talent transitioned to Tempest Rising.

GHOSTRUNNER

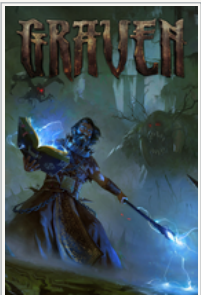

Developer	Slipgate Ironworks / One More Level
Publisher	3D Realms / 505 Games
Platforms	PC, PS4, PS5, Xbox One, Xbox Series X S, Switch
Role	Level Designer + Set Dressing

Slipgate Ironworks supported Ghostrunner through co-development and development of the console ports.

Working with One More Level was a great experience. Their team was highly talented, which made detailing and lighting the levels especially rewarding. We received established blockouts and transformed them using the existing modular asset library, adding set dressing, environmental detail and lighting.

GRAVEN

Developer	Slipgate Ironworks
Publisher	3D Realms / 1C / Fulqrum Publishing
Platforms	PC, PS4, PS5, Xbox One, Xbox Series X S
Role	Level Designer + Set Dressing

GRAVEN entered Early Access in May 2021 and reached full release in January 2024, followed by console versions later that year.

My primary work focused on set dressing and environmental detail across most of Hub 1 and its levels, as well as the main village area in Hub 2.

I also expanded the explorable areas in Hub 1's city of Cruxfirth. This included opening previously inaccessible buildings, creating interiors, shortcuts and secrets, and taking those spaces through a complete set-dressing pass.

READY OR NOT

Developer	VOID Interactive
Publisher	VOID Interactive
Platforms	PC, PS5, Xbox Series X S
Role	Level Designer + Level Design Advisor

I supported VOID Interactive for a short period early in development as a level-design advisor, providing feedback on campaign levels and the PvP multiplayer maps that were later cut.

WRATH: AEON OF RUIN

Developer	Slipgate Ironworks
Publisher	3D Realms / 1C / Fulqrum Publishing
Platforms	PC, PS4, PS5, Xbox One, Xbox Series X S, Switch
Role	Level Designer + Production Support

I contributed early level-design and production support. My work included backend content setup, livestream preparation and technical setups, community management, and other general production tasks.

RAD RODGERS: RADICAL EDITION

Developer	Slipgate Ironworks
Publisher	3D Realms / THQ Nordic
Platforms	PC, PS4, Xbox One, Nintendo Switch
Role	Level Designer + Set Dressing

Working with THQ Nordic, we brought Rad Rodgers to PlayStation 4, Xbox One and Nintendo Switch. The Radical Edition added new levels, minigames, weapons, couch co-op and player customization, with the content also released as a free update for the PC version.

I contributed level design and set dressing, including design work on several of the new minigames.

RAD RODGERS

Developer	Slipgate Ironworks
Publisher	3D Realms
Platforms	PC (Windows)
Role	Level Designer + Set Dressing

Rad Rodgers was my first professional level-design project at Interceptor Entertainment. I began by set dressing a small area as a test assignment during my internship, then quickly took on additional work alongside the core level-design team.

Toward the end of development, I focused on final-detail passes and completed environmental audio passes across the majority of the levels.
